

Notilyze announces availability SaasNow via public cloud

Milan, 22 October 2019 - Notilyze, supplier of analytics as a service, is now also making SaasNow available via the public cloud. SaasNow is a self-service portal for BI and analytics software from SAS. By offering SaasNow in the public cloud in addition to a private cloud environment, customers benefit from local availability and more scalability. The first locations where SaasNow is expanding with its public cloud offering are Canada, Singapore and Japan.

SaaSNow was developed based on the philosophy that smaller companies should also be able to use advanced analytics. Organizations can start using the [SAS Viya platform](#) with their own cloud environment within a day. The SaaSNow servers are hosted in Amsterdam and New York. Now that SaaSNow is also available through the public cloud, it's easier for organizations that want to work locally or have specific compliance requirements, to host their SAS environment in a public cloud without having to rely on servers in other countries.

Maximum performance and availability

"We've experienced that advanced applications and specific use cases require maximum performance and local availability of SaaSNow," says Tom Dogger, co-founder of Notilyze. "By expanding our infrastructure with the flexibility of the public cloud, we can guarantee customers on-site that we can meet these needs. Moreover they also comply with local regulations and can easily scale up for more capacity.

Canada, Singapore and Japan are the first locations where SaaSNow is expanding with its public cloud offering. Dogger expects to be able to announce more regions in the first quarter of 2020: "Adding new regions where SaaSNow is available via the public cloud depends on the demand we receive. Based on that, we will decide where we will expand first." SaaSNow via the private cloud is now available in more than 180 countries.

Customers that want to purchase SaaSNow via the public cloud can choose from two models: On Demand or Always On. [Click this link](#) for more information about the different options.

Analytics Experience

Notilyze announces the availability of SaaSNow via the public cloud during the [Analytics Experience](#) of SAS in Milan. At this conference more than 1800 data scientists and business professionals come together to learn about new applications and best practices in the field of analytics.
